

## END SEMESTER ASSESSMENT (ESA)

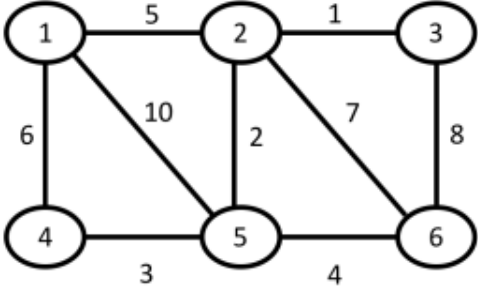

## UE18CS251- Design and Analysis of Algorithms

Time: 3 Hrs

## Answer All Questions

Max Marks: 100

1.	a)	Define $O$ , $\Omega$ and $\Theta$ notations.	6															
	b)	Write algorithm to solve the tower of Hanoi problem and derive its efficiency.	6															
	c)	Write algorithm for selection sort and derive its efficiency.	8															
2.	a)	Write the algorithm for Quick sort and derive the efficiency for the best case.	8															
	b)	Write an algorithm to find the smallest element in an array A [0..n-1] using a) Brute force b) Divide and conquer c) Decrease and conquer.	6															
	c)	<div></div> <p>Write the algorithm for finding topological sequence using DFS. For the above DAG find the topological sequence using DFS based algorithm.</p>	6															
3.	a)	Write the algorithm heapify in the code given below to delete the largest element in the maximum heap delete_max(H[1..n]) { T=H[1]; H[1]=H[n] heapify(H[1..n-1]) // re creates the heap return T }	6															
	b)	i) Find the next two permutations using Johnson Trotter algorithm <div><div>&lt;-</div><div>&lt;-</div><div>&lt;-</div><div>&lt;-</div><div>-&gt;</div></div> <div><div>4</div><div>1</div><div>3</div><div>2</div><div>5</div></div> <div>ii) Find the next two permutations using lexicographic algorithm 3 1 9 2 5</div>	6															
	c)	Construct a RED BLACK tree by inserting the following numbers in sequence : 2,1,4,5,9,3,6,7	8															
4.	a)	Apply Boyer Moore's algorithm to search for the pattern AT_THAT in the text WHICH_FINALY_HALTS__AT_THAT.	10															
	b)	Find the solution for the following instance of Knapsack problem using dynamic programming with memory function. (Fill the table cells only if required). <table><tr><td>Item</td><td>1</td><td>2</td><td>3</td><td>4</td><td rowspan="3">Capacity W=5</td></tr><tr><td>Weight</td><td>2</td><td>1</td><td>3</td><td>2</td></tr><tr><td>Value</td><td>3</td><td>4</td><td>5</td><td>6</td></tr></table>	Item	1	2	3	4	Capacity W=5	Weight	2	1	3	2	Value	3	4	5	6
Item	1	2	3	4	Capacity W=5													
Weight	2	1	3	2														
Value	3	4	5	6														

5	a	<div><p>Construct a <b>Maximum spanning tree</b> using Prims algorithm for the above given graph. (Hint: Negate all the edges and apply Prims algorithm.)</p></div>	10
	b	<div>Explain in brief the following design strategies</div> <div><div>a) Greedy Technique</div><div>b) Backtracking</div><div>c) Branch and Bound</div></div>	10
