How to Change Your Hostname (Computer Name) on Ubuntu Linux

Step 1: To modify "username@hostname" part in the existing Bash prompt (seed@VM), edit the ~/.bashrc file.

Step 2: To do so, edit ~/.bashrc using Vi editor.

```
rerminal
[06/17/19]seed@VM:~$ vi ~/.bashrc
```

Add the following at the end:

PS1 = '\u@10.0.2.6:\w\\$'

```
tform-tools:/home/seed/android/android-ndk/android-ndk-r8d:/home/seed/.local/bin
export LD_PRELOAD=/home/seed/lib/boost/libboost_program
_options.so.1.64.0:/home/seed/lib/boost/libboost_filesy
stem.so.1.64.0:/home/seed/lib/boost/libboost_system.so.
1.64.0
PS1='\u@10.0.2.6:\w\$'
```

Step 3: Run the following command and the result would be as shown in screenshot:

\$..bashrc

```
[06/17/19]seed@VM:~$ . .bashrc
seed@10.0.2.6:~$
```
