# Exploiting Metasploitable Using Metasploit

In this Assignment we will use metasploit to break into an intentionally vulnerable system

[Download Metasploitable - Intentionally Vulnerable Machine | Rapid7](#)

We did vsftpd and webdav in class try to exploit webdav using than php reverse shell as well as exploit some other service other than vsftpd and webdav and gain access through that service

## General Guidelines:

1. Make sure that terminal names reflect your name and SRN. (eg: AAYUSH_PES12018XXXXX)
2. Explain every Individual step taken to gain root access.
